

Shakidul Islam Shakil

Junior Front-End Developer

Forward-thinking to be a professional Junior Front-End Developer with full experience of many projects. A lot of projects both front-end and back-end were made as well as developed successfully. Strongly would like to be responsible for developing and for making users satisfied.

- Python

Additional Skills

- Good enough in problem solving
- Great Communication Skill
- Team working
- Strong knowledge about project management and more.

Education

- BSc in CSE (Computer Science and Engineering)
3rd year. (studying)

Projects that I Build

Tools Manufacturer [Live link](#) [Client site\(Github\)](#) [Server site\(Github\)](#)

- People can order any tool that they need and then have to pay. Payment gateway was added and an user can pay for the required product whenever they want to.
- This project is different for general users and admin. Admin can add a product, delete a product and make another user an admin and so on.
- Made this project responsive and look awesome.
- There are two role playing parts in this project. One is the Admin role another is the user role. To log in as admin use this email and password below:
Email: herokujoy123@gmail.com password: Heroku123

Smartbook Warehouse [Live link](#) [Client site\(Github\)](#) [Server site\(Github\)](#)

- A website for the warehouse where the book's information will be in touch. Owner of the warehouse can update whatever they want.
- JWT implemented and verified the user when they logged in to it.
- Has a strong authentication to recognize users.

Temperature View website [Live line](#) [Github\(Repo\)](#)

- Loaded data calling weather API
- Made the website responsive and added cover photos to look different.

Passion and destination

When something becomes developed by me, it satisfies me more than anything. It can be a website or anything else. I feel like I'm spending my time working on helping people. Actually, it inspires me to do this great work for the rest of my life.
